

Project Presentations Made Easy.

An overview of OnePager For Project and OnePager For Excel for IT professionals.

Product Overview

OnePager For Project and OnePager for Excel are project reporting software packages that engage project teams and hold their attention with rich, concise project timeline views. OnePager saves project managers time with building project presentations.

How It Works

OnePager works by importing data from either Microsoft Project or Excel:

- Launches from the desktop as a stand alone app; or
- Launches from the Project or Excel toolbar as an add-in
- Imports source data into its own file
- Does not alter source Project or Excel files

Compatibility

OnePager is designed to work with any edition of Microsoft Office or Office 365, and is compatible with most operating systems:

- Microsoft Project or Project Server 2003-2016 (32 or 64-bit),
- or Project Online with Project Pro for O365 (Office 365)
- Microsoft Excel 2002-2016 (32 or 64-bit), or Office 365
- Windows XP, Vista, 7, 8, 8.1, or 10 (32 or 64-bit)

System Requirements and Performance

OnePager uses minimal system resources to create its charts:

- Minimal memory (100 KB) and disk (15 MB) required
- No performance impact on Microsoft Office
- OnePager add-in option can be disabled as needed
- Requires .NET Framework 2.0 or later
- Will not interfere with other Office add-ins

Licensing

OnePager offers several licensing options:

- Single-user licenses (machine-specific keys)
- Volume licenses (organization-wide keys)

Machine-specific keys can be requested via e-mail by either end users or IT personnel, and can be reissued to support hardware and OS upgrades.

For volume licensing information, please contact sales@onepager.com

Installation and Deployment

OnePager is designed so that it can be easily installed by either IT personnel or end users:

- Installed via standard MSI file compatible with all desktop-management software.
- Installation locations follow Microsoft User-Account Control recommendations.
- Documentation set includes read-me file, quick-start guide, complete user manual, interactive help, and online FAQ.

OnePager personnel regularly works with IT departments and their managed application deployment and imaging processes to enable custom installs of its products.

Maintenance and Support

OnePager offers subscriptions to its comprehensive maintenance and support program, which includes:

- Same-day phone and e-mail support for IT personnel or end users
- Complimentary upgrades as new versions are released (optional; no forced downloads)

Maintenance and support can be renewed annually to ensure that end users always have the most current version of the application. OnePager offers support and upgrades on a fee basis for customers whose maintenance and support has expired. Contact for more information.

Security

Our team will work with third parties to ensure the secure operations of its products:

- Microsoft Authenticode digital signature guarantees safe installation
- Microsoft strong naming prevents executable tampering
- Microsoft Certified Partner (2010-2017)
- Microsoft Platform Test (VeriTest) third party vulnerability testing
- Usage data never transmitted back to OnePager
